

APPENDIX V. U.S. RESIDUE LIMITS FOR PESTICIDES IN MEAT, POULTRY, AND EGG PRODUCTS

INTRODUCTION

This appendix provides information on the residue limits (tolerances and action levels) for pesticides in meat, poultry, and egg products. Tolerances, which are set by the Environmental Protection Agency (EPA) for currently registered pesticides, are applied by the Food Safety and Inspection Service (Food Safety and Inspection Service) in its regulatory programs. The official source of these tolerances is Title 40, Part 180 of the Code of Federal Regulations (CFR).

For some cancelled pesticides that persist in the environment, EPA has recommended action levels to FSIS. Action levels are listed in the Federal Register (FR).

FSIS does not permit concentrations of residues in meat and poultry that exceed the tolerances or action levels published in the CRF or FR. This appendix supplies the relevant citation for each tolerance and action level.

The tolerances and action levels in poultry, livestock and egg products are listed alphabetically by compound. These residue limits may be for the parent compound (the original chemical form of the compound to which the animal is exposed), or for the compound's metabolites (the chemical forms into which the compound is metabolized by the animal), or for a combination of parent plus metabolites. All tolerances and action levels are provided in units of parts per million (ppm). Please note that this appendix has been generated for the convenience of the reader, and if any discrepancies arise between this appendix and the CFR or FR, the values from the latter two sources should be used.

Unless otherwise indicated, "meat by-products" include kidney and liver.
